Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground

space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground – the black circle in the logos – it will be possible to preserve and enhance the quality of the space at ground level – the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.

UK construction shows its underlying strength. Tender prices have risen strongly since last year's book was compiled -- increasing by around 8%, and at an annualised rate of close to 10% in the last half year. Spon's Architects' and Builders' Price Book 2017, compiled by AECOM, still provides the most accurate, detailed and professionally relevant construction price information for the UK. Its unique Tender Index, updated through the year, gives an ongoing reality check and allows you to adjust for changing market conditions. Although it suits a wide range of project sizes, this is the only price book which sets out a detailed cost base for contracts exceeding £4,000,000 in value. Use the access code inside the front cover of the book to get set up with internet access to this 2017 edition until the end of December 2017. We now provide a VitalSource® ebook, giving a versatile and powerful online data viewing package. Major changes have been made to this 142nd edition: Major revision and simplification has been made to the in situ concrete section, and plasterboard linings and partitions sections have been heavily revised and developed. New Cost Models are included: a laboratory, a car park and an updated London Office. More plant prices have been separated out in the measured works section. As well as an overhaul of prices, several new items have been added, including: Foamglas insulation Carlite waterproof concrete and an expanded range of stone flooring ... along with the standard

features you have come to expect from Spon's A&B: 20,000 prices for the most frequently specified items, the majority with labour constants and detailed build-ups. Hundreds of alternative materials prices for the more unusual items. Detailed guidance on wage rates, daywork, cost limits and allowances, property insurance and professional fees, plus useful formulae, design criteria and trade association addresses. Arbitration in Context Series Volume 1 There is probably no area of activity more in need of reliable dispute resolution procedures than construction projects, especially if more than one jurisdiction is involved. The third edition of this eminently practical guide greatly facilitates the process for all parties concerned. The text, updated to include the latest edition of arbitral rules and introducing the Prague Rules, considers the full range of available dispute resolution methods, including mediation, conciliation and determination by dispute review boards, before focusing specifically on arbitration. The book then looks in detail at all aspects of arbitration, from commencement of proceedings, selection of the tribunal, through preparation and collection of the evidence necessary in complex construction cases, to common procedural issues, the conduct of the hearing, the effect of the award, challenges to it and its enforcement. The third edition addresses fresh thinking on MedArb, guidance on preparation for and conduct of virtual hearings in the wake of COVID-19, technological advances to assist collection and presentation of evidence, litigation funding and includes a new chapter on the role of arbitration in tender disputes. Specific valuable features include the following: guidance on the drafting of dispute resolution provisions designed to minimise disputes and facilitate their swift resolution; flowcharts to illustrate the stages in dispute procedures and arbitration; a comparison between common law and civil law approaches to key concepts; details of the key features of a construction contract, common standard forms and procurement structures; expert guidance on effective contract administration; step-by-step advice on the conduct of a construction arbitration to maximise efficiency; and coverage of particular issues thrown up by complex construction disputes which differentiate them from other commercial disputes, with guidelines on how to approach such issues in the presentation before a tribunal. As an easy-to-use resource for both general counsel and the lawyers in private practice, this book has no peers. It has proved to be of particular value to commercial contract negotiators and corporate counsel who may have many years of experience but have not had to live through a construction dispute or manage a construction contract during the life of a project. Lawyers in private practice embarking on a construction dispute for the first time will also find this book of value, as will students of dispute resolution.

ICD-10 is the 10th revision of the International Statistical Classification of Diseases and Related Health Problems (ICD), a medical classification list by the World Health Organization. It contains codes for diseases, signs and symptoms, abnormal findings, complaints, social circumstances, and external causes of injury of diseases. The code set allows more than 14,000 different codes and permits the tracking of many new diagnoses. The U.S. has used ICD-10-CM (Clinical Modification) since October, 2015. This national variant of ICD-10 was provided by the Centers for Medicare and Medicaid Services (CMS) and the National Center for Health Statistics, and the use of ICD-10-CM codes are now mandated for all inpatient medical reporting requirements. This book is for physicians, practice managers and all others who need learn ICD-10. It's designed for the clinician to learn how to put their diagnosis into a code and not rely on staff or computer software programs to decide it form them. ICD-10 is a complex system of coding and Medicare and third party insurers have been lenient giving providers a year to get used to the coding system. As a result, physicians and their staff have become very complacent regarding proper coding. However, Medicare and third party insurers will soon begin to deny claims which are not coded correctly, which in turn will cost physician groups time and money. This book focuses on Worker's Compensation and Personal Injury, a very large segment of the healthcare industry and is a new area to ICD-10. The diagnosis coding for injuries is much different than for Medicare or group insurance and unless the physicians and their staff learn how to use it properly, they risk losing income for themselves and worse, they risk losing the case for the patient. The material draws on many traditions, including the Celtic, and aims to help us to be fully present to God, who is fully present to us - in our neighbour, in the political and social activity of the world around us, and in the very centre and soul of our being. Each year, thousands of visitors make their way to Iona and many are changed by their time on this small Hebridean island which has been a powerful spiritual centre over the centuries. The Iona Community believes that we are brought to Iona not to be changed into 'religious' people, but rather to be made more fully human. Our common life - including our services - is directed to that end. Napoleon Bonaparte was one of the most influential rulers in European history. Renowned as a military commander, he was also a great statesman, administrator, lawmaker and builder - and his civic achievements outlived and arguably eclipsed his victories on the battlefield. Yet while there are a host of biographies and studies of his military and political career, few books have been written about his connections with Paris, the capital of his empire, where many remarkable buildings and monuments date from his time in power. That is why David Buttery's highly illustrated guidebook to Napoleon's Paris is such a timely and valuable addition to the literature designed for visitors to the city. Many of the most famous sites in the city were built or enhanced on Napoleon's instructions or are closely associated with him and with the period of the First French Empire - the Arc de Triomphe, the Louvre, the Hôtel des Invalides, Musée de l'Armée,

Notre Dame Cathedral, Père-Lachaise Cemetery among them. David Buttery's guide covers them all in evocative detail. His work is essential reading for every visitor to Paris who is keen to gain an insight into the influence of Napoleon on the city and the tumultuous period in French history in which he was the dominant figure.
