**World Prehistory and Archaeology** Apr 20 2022 An integrated picture of prehistory as an active process of discovery. *World Prehistory and Archaeology: Pathways through Time*, third edition, provides an integrated discussion of world prehistory and archaeological methods. This text emphasizes the relevance of how we know and what we know about our human prehistory. A cornerstone of *World Prehistory and Archaeology* is the discussion of prehistory as an active process of discovery. Methodological issues are addressed throughout the text to engage readers. Archaeological methods are introduced in the first two chapters. Succeeding chapters then address the question of how we know the past to provide an integrated presentation of prehistory. The third edition involves readers in the current state of archaeological research, revealing how archaeologists work and interpret what they find. Through the coverage of various new research, author Michael Chazan shows how archaeology is truly a global discipline. Learning Goals Upon completing this book, readers will be able to: \* Gain new perspectives and insights into who we are and how our world came into being. \* Think about humanity from the perspective of archaeology. \* Appreciate the importance of the archaeological record for understanding contemporary society.

*Death as a Process* Mar 02 2023

**In the Beginning** Dec 24 2019 For courses in Introduction to Archaeology, Method and Theory in Archaeology. This comprehensive narrative uses an international perspective throughout while outlining the basic principles, methods, and theoretical approaches of modern archaeology. It gives students a basic grounding on the subject, the career opportunities it offers, and a look at some of the spectacular and not so well known discoveries that illuminate our past. Written by a master of the genre, the text emphasizes remote sensing techniques for archaeological survey, addresses the study of gender and ethnic diversity from the archaeological record, and assesses the importance of archaeology in the modern world.

**Data Processing in Archaeology** Nov 27 2022 This book aims to give archaeologists a non-technical but thorough grounding in the use of computers.

*Processual Archaeology: Exploring Analytical Strategies, Frames of Reference, and Culture Process* Aug 12 2021 Processual archaeologists seek to explain variability in the static archaeological record we observe in the present as a necessary first step toward learning how to learn about the operation of cultural dynamics in the past. The approach is a diverse and productive one that focuses on developing learning strategies. Researchers pursuing processual archaeology have already discovered a great deal about the archaeological record and about past dynamics, and there is a huge potential for building on the foundation laid thus far. The contributors to this volume provide clearly written research articles that are easily accessible to upper-level undergraduates and professional archaeologists. Although the papers do not focus on a single region, time period, or domain of observation (e.g. settlement patterns or lithics or site structure), they are integrated by shared goals for archaeology. This book clearly demonstrates that processual archaeology, far from having been replaced by post-processual archaeology, is becoming more and more powerful as our analytic sophistication and knowledge of the archaeological record grow.

**The Archaeological Process** Sep 25 2022 This provocative introduction examines the most important new school of archaeological thought and practice to have emerged over the last two decades and provides students with an assessment of the impact and importance of recent theoretical debates.

**Reconsidering Archaeological Fieldwork** Oct 02 2020 Digging, recording, and writing are the three main processes that archaeologists undertake to analyze a site, yet the relationships between these processes is rarely considered critically. *Reconsidering Archaeological Fieldwork* asserts that each of these processes involves at least a bit of subjective interpretation. As a group of archaeologists work together to reconstruct an objective view of the past, at a particular time, at a particular site, their field methods and subjective interpretations affect the final analysis. This volume explores the important nature of the relationship between fieldwork, analysis, and interpretation. Containing contributions from a diverse group of archaeologists, both academic and professional, from Europe and the Americas, it critically analyzes accepted practices in field archaeology, and provide thoughtful and innovative analysis of these procedures. By combining the experiences of both academic and professional archaeologists, *Reconsidering Archaeological Fieldwork* highlights key differences and key similarities in their concerns, theories, and techniques. This volume will incite discussion on fundamental questions for all archaeologists, both old and new to the field.

*Entangled* Feb 06 2021 A powerful and innovative argument that explores the complexity of the human relationship with material things, demonstrating how humans and societies are entrapped into the maintenance and sustaining of material worlds. Argues that the interrelationship of humans and things is a defining characteristic of human history and culture. Offers a nuanced argument that values the physical processes of things without succumbing to materialism. Discusses historical and modern examples, using evolutionary theory to show how long-standing entanglements are irreversible and increase in scale and complexity over time. Integrates aspects of a diverse array of contemporary theories in archaeology and related natural and biological sciences. Provides a critical review of many of the key contemporary perspectives from materiality, material culture studies and phenomenology to evolutionary theory, behavioral archaeology, cognitive archaeology, human behavioral ecology, Actor Network Theory and complexity theory.

**Hunter-Gatherer Archaeology as Historical Process** May 21 2022 Combining the latest empirical studies of archaeological practice with the latest conceptual tools of anthropological and historical theory, this volume seeks to set a new course for hunter-gatherer archaeology.

**Archaeology by Design** May 29 2020 Archaeology doesn't just happen. With large numbers of people involved, the complex logistics of fieldwork, funding needed for projects of any size, and a bewildering set of legal regulations and ethical norms to follow, a well-run archaeological project requires careful and detailed planning. In this reader-friendly guide, Black and Jolly give novice researchers invaluable practical advice on the process of designing successful field projects. Encompassing both directed academic and directed CRM projects, they outline the elements needed in your professional toolkit, show step-by-step how an archaeological project proceeds, focus on developing appropriate research questions and theoretical models, and address implementation issues from NAGPRA regulations down to estimating the number of shovels to toss into the pickup. Sidebars explain important topics like the Section 106 process, the importance of ethnology and geology to archaeologists, OSHA requirements, and how to assess significance. *Archaeology by Design* is an ideal starting point for giving students and novices the big picture of a contemporary archaeological project.

**Formation Processes of the Archaeological Record** Nov 15 2021 Synthesizes the most important principles of cultural and environmental formation processes for both students and practicing archaeologists.

**Archaeology For Dummies** Jul 31 2020 An objective guide to this fascinating science of history and culture. Archaeology continually makes headlines--from recent discoveries like the frozen Copper-Age man in the Italian Alps to the newest dating of the first people in America at over 14,000 years ago. *Archaeology For Dummies* offers a fascinating look at this intriguing field, taking readers on-site and revealing little-known details about some of the world's greatest archaeological discoveries. It explores how archaeology attempts to uncover the lives of our ancestors, examining historical dig sites around the world and explaining theories about ancient human societies. The guide also offers helpful information for readers who want to participate in an excavation.

themselves, as well as tips for getting the best training and where to look for jobs.

**Images in the making** Oct 14 2021 This book offers an analysis of archaeological imagery based on new materialist approaches. Reassessing the representational paradigm of archaeological image analysis, it argues for the importance of ontology, redefining images as material processes or events that draw together differing aspects of the world. The book is divided into three sections: 'Emergent images', which focuses on practices of making; 'Images as process', which examines the making and role of images in prehistoric societies; and 'Unfolding images', which focuses on how images change as they are made and circulated. Featuring contributions from archaeologists, Egyptologists, anthropologists and artists, it highlights the multiple role of images in prehistoric and historic societies, while demonstrating that scholars need to recognise their dynamic and changeable character.

**Archaeological Anthropology** Apr 27 2020 For centuries, the goal of archaeologists was to document and describe material artifacts, and at best to make inferences about the origins and evolution of human culture and about prehistoric and historic societies. During the 1960s, however, a number of young, primarily American archaeologists, including William Longacre, rebelled against this simplistic approach. Wanting to do more than just describe, Longacre and others believed that genuine explanations could be achieved by changing the direction, scope, and methodology of the field. What resulted was the New Archaeology, which blended scientific method and anthropology. It urged those working in the field to formulate hypotheses, derive conclusions deductively and, most important, to test them. While, over time the New Archaeology has had its critics, one point remains irrefutable: archaeology will never return to what has since been called its 'state of innocence.' In this collection of twelve new chapters, four generations of Longacre protégés show how they are building upon and developing but also modifying the theoretical paradigm that remains at the core of Americanist archaeology. The contributions focus on six themes prominent in Longacre's career: the intellectual history of the field in the late twentieth century, archaeological methodology, analogical inference, ethnoarchaeology, cultural evolution, and reconstructing ancient society. More than a comprehensive overview of the ideas developed by one of the most influential scholars in the field, however, *Archaeological Anthropology* makes stimulating contributions to contemporary research. The contributors do not unequivocally endorse Longacre's ideas; they challenge them and expand beyond them, making this volume a fitting tribute to a man whose robust research and teaching career continues to resonate.

**Method and Theory in American Archaeology** Oct 22 2019 A Dan Josselyn Memorial Publication This invaluable classic provides the framework for the development of American archaeology during the last half of the 20th century. In 1958 Gordon R. Willey and Philip Phillips first published *Method and Theory in American Archaeology*—a volume that went through five printings, the last in 1967 at the height of what became known as the new, or processual, archaeology. The advent of processual archaeology, according to Willey and Phillips, represented a "theoretical debate . . . a question of whether archaeology should be the study of cultural history or the study of cultural process." Willey and Phillips suggested that little interpretation had taken place in American archaeology, and their book offered an analytical perspective; the methods they described and the structural framework they used for synthesizing American prehistory were all geared toward interpretation. *Method and Theory* served as the catalyst and primary reader on the topic for over a decade. This facsimile reprint edition of the original University of Chicago Press volume includes a new foreword by Gordon R. Willey, which outlines the state of American archaeology at the time of the original publication, and a new introduction by the editors to place the book in historical context. The bibliography is exhaustive. Academic libraries, students, professionals, and knowledgeable amateurs will welcome this new edition of a standard-maker among texts on American archaeology.

**The Oxford Handbook of the Archaeology of Death and Burial** Mar 27 2020 The Oxford Handbook of the Archaeology of Death and Burial reviews the current state of mortuary archaeology and its practice, highlighting its often contentious place in the modern socio-politics of archaeology. It contains forty-four chapters which focus on the history of the discipline and its current scientific techniques and methods. Written by leading, international scholars in the field, it derives its examples and case studies from a wide range of time periods, such as the middle palaeolithic to the twentieth century, and geographical areas which include Europe, North and South America, Africa, and Asia. Combining up-to-date knowledge of relevant archaeological research with critical assessments of the theme and an evaluation of future research trajectories, it draws attention to the social, symbolic, and theoretical aspects of interpreting mortuary archaeology. The volume is well-illustrated with maps, plans, photographs, and illustrations and is ideally suited for students and researchers.

**Processual Archaeology** Oct 26 2022 Presents a collection of work in processual archaeology that represents a wide range of research domains, rather than being focused on a specific topic or style of research.

**Experimental Archaeology** Jun 10 2021 Six of the eleven papers in this volume are revised versions of those given at a symposium session at the SAA meeting in Chicago in 1999, along with an introduction and four extra contributions. The papers discuss object, behavioural and process replication and include both specific case studies, such as 'Controlled experiments with Middle Palaeolithic spear points', to more general studies of 'Assessing the process of experimentation'.

**Building on the Past** Mar 07 2021 This comprehensive guide provides planners, developers, architects and archaeologists with an analysis of the conflicts between the archaeological development and planning processes. It takes a pragmatic approach to the effects of archaeology on development, enabling practitioners to reach practical solutions where archaeological considerations are taken into account in the development process.

**Archaeology in the Planning Process** Sep 01 2020

**Advances in Archaeological Method and Theory** Feb 24 2020 *Advances in Archaeological Method and Theory*, Volume 8 is a collection of papers that discusses postprocessual archaeology, bone technology, and tree-ring dating in Eastern North America. One paper discriminates between the process and norm, and eliminates the dichotomy by locating human agency and the active. It focuses on monitoring individuals as being in the center of social theory. Another paper discusses the physical model and the textual model that describe the basic components of an archaeological record. For example, the first model implies that archaeological inferences move from material components of the record to material phenomena in the past. The second model assumes that archaeological inference should move from material phenomena to mental phenomena, from material symbols to the ideas and beliefs they encode. Another paper explains the use of analogy as a useful tool in archaeological considerations. One paper investigates bones as a material for study, including the analysis of carnivore-induced fractures or hominid-induced modifications from using bones as tools. The collection is suitable for sociologists, anthropologist, professional or amateur archaeologists, and museum curators studying archaeological artifacts.

**Time, Process and Structured Transformation in Archaeology** Dec 16 2021 In a discipline which essentially studies how modern man came to be, it is remarkable that there are hardly any conceptual tools to describe change. This is due to the history of the western intellectual and scientific tradition, which for a long time favoured mechanics over dynamics, and the study of stability over that of change. Change was primarily deemed due to external events (in archaeology mainly climatic or 'environmental'). Revolutionary innovations in the natural and life sciences, often (erroneously) referred to as 'chaos theory', suggest that there are ways to overcome this problem. A wide range of processes can be described in terms of dynamic systems, and modern computing methods enable us to investigate many of their properties. This volume presents a cogent argument for the use of such approaches, and a discussion of a number of its aspects by a range of scientists from the humanities, social and natural sciences, and archaeology.

**Archaeological Method and Theory** Jul 23 2022 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often - and inconveniently - treated in separate publications. It provides a survey of archaeological method and theory, as well as the application of physical and biological sciences in archaeological research. Every aspect of archaeological work is represented, from the discovery process to the ultimate disposition of materials. Thus the reader will find entries on subject matter covering: \* disciplinary theory \* legislation affecting the work of archaeologists \* pre-excavation surveying \* excavation methodology \* on-site conservation techniques \* post-excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources. Here, the latest refinements in techniques such as radiometric dating, stable isotopic analysis, and the PCR technique of DNA analysis are presented clearly and authoritatively. The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences. Cultural property legislation, regardless of its country of origin, has affected how archaeologists conduct their work. This encyclopedia covers all major U.S. legislation developed for the protection of cultural property, including the recent Native American Graves Protection and Repatriation Act, and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology. Without some sort of conservation program at the point of excavation, valuable materials may be inadvertently contaminated or destroyed. Many simple and low-cost techniques to promote both sample integrity and long-term preservation for major classes of materials are described in this volume. Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range. This volume includes

discussions based on various historical periods on different continents, as reflected in entries such as Historical Archaeology, Industrial Archaeology, Medieval Archaeology, and Classical Archaeology.

**Structure and Process in Southeastern Archaeology** Aug 24 2022 Within the general structure-and-process theme of this compendium, the authors have focused on either intrasite problems (those dealing with the formation and structure of a site, type of site, or type of feature) or intersite problems (those dealing with behavioral organization and process as developed from comparative site data). These papers, from a broad range of specialists, present a comprehensive study of southeastern archaeology.

**Digging into Software Knowledge Generation in Cultural Heritage** Nov 03 2020 This book focuses on innovative strategies to manage and build software systems for generating new knowledge from large archaeological data sets. The book also reports on two case studies carried out in real-world scenarios within the Cultural Heritage setting. The book presents an original conceptual framework for developing software solutions to assist the knowledge generation process in connection with large archaeological data sets and related cultural heritage information—a context in which the inputs are mainly textual sources written in freestyle, i.e. without a predetermined, standard structure. Following an in-depth exploration of recent works on the knowledge generation process in the above-mentioned context and IT-based options for facilitating it, the book proposes specific new techniques capable of capturing the structure and semantics implicit in such textual sources, and argues for using this information in the knowledge generation process. The main result is the development of a conceptual framework that can accommodate textual sources and integrate the information included in them into a software engineering framework. The said framework is meant to assist cultural heritage professionals in general, and archaeologists in particular, in both knowledge extraction and the subsequent decision-making process.

**Process and Meaning in Spatial Archaeology** Jul 11 2021 Process and Meaning in Spatial Archaeology examines Northern Iroquoian archaeology through various lenses at multiple spatial levels, including individual households, village constructions, relationships between villages in a local region, and relationships between various Iroquoian nations and their territorial homelands. The volume includes scholars and scholarship from both sides of the US-Canadian border, presenting a contextualized analysis of settlement and landscape for a broad range of past Northern Iroquoian societies. The research in this volume represents a new wave of spatial research—exploring beyond settlement patterning to the process and the meaning behind spatial arrangement of past communities and people—and describes new approaches being used for better understanding of past Northern Iroquoian societies. Addressing topics ranging from household task-scapes and gender relations to bioarchaeology and social network analysis, Process and Meaning in Spatial Archaeology demonstrates the vitality of current archaeological research into ancestral Northern Iroquoian societies and its growing contribution to wider debates in North American archaeology. This cutting-edge research will be of interest to archaeologists globally, as well as academics and graduate students studying Northern Iroquoian societies and cultures, geography, and spatial analysis. Contributors: Kathleen M. S. Allen, Jennifer A. Birch, William Engelbrecht, Crystal Forrest, John P. Hart, Sandra Katz, Robert H. Pihl, Aleksandra Pradzynski, Erin C. Rodriguez, Dean R. Snow, Ronald F. Williamson, Rob Wojtowicz

**Theory, Method, and Practice in Modern Archaeology** Apr 08 2021 This book presents 18 essays by leading scholars covering mortuary analysis, the archaeology of foraging and agricultural societies, cultural evolution, and archaeological method and theory, which transcend the processual/postprocessual debate in archaeology and provide examples of how archaeologists think about, and go about, studying the past. As archaeology encounters the 21st century, debate over the nature of the discipline dominates professional discourse. Archaeologists are embattled over isms: processualism, postprocessualism, scientism, and humanism are ubiquitous buzzwords in the literature. Yet archaeology is a craft practiced by individuals, learned from and influenced by other individuals. Sometimes a person, through sheer force of intellectual spirit, rises above the debate to make a mark on the field in ways that cross out schools, paradigms, and factions. It is fitting to look back at the influence one such individual has had on archaeological methods, theory, data collection, and syntheses over the last half century. This volume draws on the experience of students and colleagues who worked with and were strongly influenced by James A. Brown's approach to the past. The volume is divided into five categories, each reflecting one distinctive facet of Brown's affect on archaeology: mortuary analysis, foraging and horticultural societies, complex agriculturalists, proto-historic and historic societies, and method and theory. These diverse categories, with articles by archaeologists of many backgrounds, are drawn together by the threads of Brown's intellectual legacy. Not all authors here are in agreement with Brown's views on their subjects, but all acknowledge that his work in the area sets a standard that needs to be met if one is to succeed.

**Archaeological Investigation** Jan 17 2022 Drawing its numerous examples from Britain and beyond, Archaeological Investigation explores the procedures used in field archaeology travelling over the whole process from discovery to publication. Divided into four parts, it argues for a set of principles in part one, describes work in the field in part two and how to write up in part three. Part four describes the modern world in which all types of archaeologist operate, academic and professional. The central chapter 'Projects Galore' takes the reader on a whirlwind tour through different kinds of investigation including in caves, gravel quarries, towns, historic buildings and underwater. Archaeological Investigation intends to be a companion for a newcomer to professional archaeology – from a student introduction (part one), to first practical work (part two) to the first responsibilities for producing reports (part three) and, in part four, to the tasks of project design and heritage curation that provide the meat and drink of the fully fledged professional. The book also proposes new ways of doing things, tried out over the author's thirty years in the field and brought together here for the first time. This is no plodding manual but an inspiring, provocative, informative and entertaining book, urging that archaeological investigation is one of the most important things society does.

**Archaeology** Jun 29 2020 This is the only textbook which is organized to follow the steps of the actual process of archaeological research in order to present the methods and theoretical frameworks of archaeology, from the planning and actual conduct of field research, to the different ways archaeological data is interpreted to produce an understanding of the past. It is also the only such textbook to give the reader a series of firsthand accounts of what its like to do archaeology, written by a variety of practicing archaeologists.

**Dug to Death** May 09 2021 Dr. Hannah Green—heroine of Praetzelis's textbook-as-novel *Death by Theory*—has really gotten herself into trouble this time. The spunky archaeologist has been asked to manage the contract archaeology project at a historic site in New Zealand when the regular archaeological staff of University of Invercargill abruptly dies off. On the scene, Hannah discovers she needs to teach her team about research design, survey methods, archival research, professional ethics, curation, and especially field safety, if they are to complete the contract before young Mr. Wallace levels the site in favor of a golf course. With a cast of characters that includes Missy-Jojo-the-Dog-Faced-Girl as lab supervisor, erotic romance writer and field volunteer Elena Solara, the ghost of socialite Bunny Wallace, and shovelbum Rusty Spittle, Praetzelis' brief textbook-as-novel introduces students to the hows and whys of field methodology in an entertaining but informative way. Ideal for your introductory archaeology classes and probably the only textbook you'll enjoy reading yourself.

**Archaeological Approaches to Technology** Jan 25 2020 This book is designed for upper-division undergraduate and graduate level archaeology students taking courses in ancient technologies, archaeological craft production, material culture, the history of technology, archaeometry, and field methods. This text can also serve as a general introduction and a reference for archaeologists, material culture specialists in socio-cultural disciplines, and engineers/scientists interested in the backgrounds and histories of their disciplines. The study of ancient technologies, that is, the ways in which objects and materials were made and used can reveal insights into economic, social, political, and ritual realms of the past. This book summarizes the current state of ancient technology studies by emphasizing methodologies, some major technologies, and the questions and issues that drive archaeologists in their consideration of these technologies. It shows the ways that technology studies can be used by archaeologists working anywhere, on any type of society and it embraces an orientation toward the practical, not the philosophical. It compares the range of pre-industrial technologies, from stone tool production, fiber crafts, wood and bone working, fired clay crafts, metal production, and glass manufacture. It includes socially contextualized case studies, as well as general descriptions of technological processes. It discusses essential terminology (technology, material culture, chaine operateire, etc.), primarily from the perspective of how these terms are used by archaeologists.

**The Historical Archaeology of Military Sites** Sep 13 2021 The recent work of anthropologists, historians, and historical archaeologists has changed the very essence of military history. While once preoccupied with great battles and the generals who commanded the armies and employed the tactics, military history has begun to emphasize the importance of the "common man" for interpreting events. As a result, military historians have begun to see military forces and the people serving in them from different perspectives. The Historical Archaeology of Military Sites has encouraged efforts to understand armies as human communities and to address the lives of those who composed them. Tying a group of combatants to the successes and failures of their military commanders leads to a failure to understand such groups as distinct social units and, in some instances, self-supporting societies: structured around a defined social and political hierarchy; regulated by law; needing to be supplied and nurtured; and often at odds with the human community whose lands they occupied, be they

those of friend or foe. The Historical Archaeology of Military Sites will afford students, professionals dealing with military sites, and the interested public examples of the latest techniques and proven field methods to aid understanding and conservation of these vital pieces of the world's heritage.

**Archaeology** Nov 22 2019 The purpose of this collection is to make research more alive for students like you who are just beginning to get to know archaeology. [This text] focuses on the way archaeologists find and recover data from archaeological sites and materials. [The text] tries to convey a feeling for the research process, but ... is focused on a particular issue or controversy rather than a method. [It] illustrate[s] how they applied archaeological methods to particular cases of interest to them - from the origins of complex polities in sub-Saharan Africa to gender roles in the Inka empire. [It also] includes two autobiographical articles. [In the text, the editors] hope you will come to appreciate that archaeology is not just an unemotional set of methods and data, but rather a bunch of hard-working, insightful people who employ those methods to answer particular questions about the past.--Preface.

**Towards Reflexive Method in Archaeology** Feb 18 2022 In this volume, Ian Hodder explains his vision of archaeological excavation, where careful examination of context and an awareness of human bias allows researchers new insights into prehistoric cognition.

**World Prehistory and Archaeology** Jun 22 2022 An Integrated Picture of Prehistory as an Active Process of Discovery World Prehistory and Archaeology: Pathways through Time, fourth edition, provides an integrated discussion of world prehistory and archaeological methods. This text emphasizes the relevance of how we know and what we know about our human prehistory. A cornerstone of World Prehistory and Archaeology is the discussion of prehistory as an active process of discovery. Methodological issues are addressed throughout the text to engage readers. Archaeological methods are introduced in two chapters. Succeeding chapters then address the question of how we know the past to provide an integrated presentation of prehistory. The fourth edition involves readers in the current state of archaeological research, revealing how archaeologists work and interpret what they find. Through the coverage of various new research, author Michael Chazan shows how archaeology is truly a global discipline. Learning Goals Upon completing this book, readers will be able to: \* Gain new perspectives and insights into who we are and how our world came into being. \* Think about humanity from the perspective of archaeology. \* Appreciate the importance of the archaeological record for contemporary society.

**Formation Processes in Archaeological Context** Jan 05 2021

**Process Archaeology** Mar 19 2022

**Death as a Process** Jan 29 2023 Wide ranging exploration of how archaeological evidence for death and burial in the Roman world can illustrate process and ritual sequence, from laying out the dead to the pyre and tomb, and from placing the dead in the earth to the return of the living to commemorate them.

**Archaeology as a Process** Dec 28 2022 The publication in 1962 of Lew Binford's paper Archaeology as Anthropology is generally considered to mark the birth of processualism - a critical turning point in American archaeology. In the hands of Binford and other young University of Chicago graduates of the 1960s, this new archaeology became the mainstream approach in the U.S. The realignment that the processualists proposed was so thorough that its effects are still being felt. Predictably, processualism also spun off a number of other isms, several of which grew up to challenge its supremacy. Archaeology as a Process traces the intellectual history of Americanist archaeology in terms of the research groups that were at the forefront of these various approaches, concentrating as much on the archaeologists as it does on method and theory, thus setting it apart from other treatments published in the last fifteen years. Peppered with rare photographs of well-known archaeologists in some interesting settings, the book documents the swirl and excitement of archaeological controversy for the past forty years with over 1,600 references and an in-depth treatment of all the major intellectual approaches. In the process, the contributors examine how archaeology is conducted - the ins and outs of how various groups work to promote themselves - and how personal ambition and animosities can function to further rather than to retard the development of the discipline.

**Digital Archaeology** Dec 04 2020 The authors address how digital technologies have been and can be incorporated within different aspects of archaeology and heritage management. They aim to stimulate widespread thought and debate on how IT can be holistically integrated into the study of past cultures.
