Based on his dissertation research, *The Retention of First-Year Black Male Students at Predominately White Private and Public Universities and Colleges* provides evidence that the retention of first-year Black male students at predominately White private or public universities

and colleges can be achieved. Using the experiences of six participants at a predominately White private university in the Washington, D.C. area, the book encourages Black male high school graduates who want to attend predominately White private or public universities or colleges to use those participants' experiences—specifically the key factors that contributed to their academic success—in obtaining their college degrees. Educated Black men tend to improve their communities, provide financially for their families, enjoy higher self-esteem, and become valuable assets to their employers, perhaps even becoming business owners. Today, African-American enrollment in higher education is at an all-time high, but there is still a 20-point gap in graduation as compared to Whites at 63%. This gap has enormous economic and societal implications. "Without education, there is no hope for our people, and without hope, our future is lost." —Journal of Blacks in Higher Education, 2009 This treatise not only offers inspiration and practical advice for Black men seeking higher education; it provides valuable suggestions for high school counselors, college administrators, and faculty who support this worthy goal. Today's cyber criminal investigator faces a formidable challenge: tracing network-based cyber criminals. The possibility of becoming a victim of cyber crime is the number-one fear of billions of people. This concern is well founded. The findings in the annual CSI/FBI Computer Crime and Security Surveys confirm that cyber crime is real and continues to be a significant threat. Traceback and attribution are performed during or after cyber violations and attacks, to identify where an attack originated, how it propagated, and what computer(s) and person(s) are responsible and should be held accountable. The goal of network forensics capabilities is to determine the path from a victimized network or system through any intermediate systems and communication pathways, back to the point of attack origination or the person who is accountable. In some cases, the computers launching an attack may themselves be compromised hosts or be controlled remotely. Attribution is the process of determining the identity of the source of a cyber attack. Types of attribution can include both digital identity (computer, user account, IP address, or enabling software) and physical identity (the actual person using the computer from which an attack originated). Cyber crime has become a painful side effect of the innovations of computer and Internet technologies. With the growth of the Internet, cyber attacks and crimes are happening every day and everywhere. It is very important to build the capability to trace and attribute attacks to the real cyber criminals and terrorists, especially in this large-scale human-built networked environment. In this chapter, we discuss the current network forensic techniques in cyber attack traceback. We focus on the current schemes in IP spoofing traceback and stepping-stone attack attribution. Furthermore, we introduce the traceback issues in Voice

over IP, Botmaster, and online fraudsters. If you plan to begin your course at 1200 C.E., we have a Ways of the World for you! Many people look to primate studies to see if and how we might be able to predict violent behavior in humans, or ultimately to control war. Of particular interest in the study of primate aggression are questions such as: how do primates use aggression to maintain social organization; what are the costs of aggression; why do some primates avoid aggressive behavior altogether. Students and

researchers in primatology, behavioral biology, anthropology, and psychology will read with interest as the editors and contributors to this book address these and other basic research questions about aggression. They bring new information to the topic as well as an integrated view of aggression that combines important evolutionary considerations with developmental, sociological and cultural perspectives. Designed as a companion reader to accompany *Ways of the World*, each chapter of *Thinking through Sources for Ways of the World* contains a *Thinking through Sources* project of six to eight carefully selected written and visual primary sources organized around a particular theme, issue, or question. Each of these projects is followed by a related *Historians' Viewpoints* secondary source feature, which pairs two brief excerpts from historians who comment on some aspect of the topics covered in the primary sources. Each source feature is accompanied by incisive questions to guide students' skillful examination of the sources. Headnotes and questions to consider before each document help students approach the documents, and essay questions at the end of each chapter provide a starting point for classroom discussion or a written assignment. *Thinking through Sources for Ways of the World* is FREE when packaged with *Ways of the World*, and is included for FREE with *ACHIEVE: Read and Practice*, and in the *LaunchPad for Ways of the World*. The Middle Ages were for many years generally viewed as a period when faith and order supported a rigid society. By painstaking archival research, historians such as Joseph R. Strayer and the contributors to this volume have gradually replaced this view with a regard for the period as a time of great intellectual diversity. These essays, divided into five groups, probe the themes of order and innovation as they appear in medieval government; finance; trade and urban life; social arrangements; and aspects of the personality and goals of the individual. The contributors focus on England, France, and the Mediterranean from about the eleventh to about the sixteenth century. Contributors: Frederic Kreisler, Charles Radding, Giles

The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. Excerpt from *The Psychology of Childhood* The first rough draft of part of this book was prepared by Professor Norsworthy in 1913, when it was suddenly put aside on account of illness and never thereafter touched. Some of it was later incorporated into the text "How to Teach," by Strayer and Norsworthy. When in 1916 it was urged that the preparation be resumed, since there seemed to be a felt need for a book of this type for use in normal schools, Miss Norsworthy's own physical condition precluded the attempt. Less than a fortnight before her death, when she was unable to talk over any details, she requested me to complete the work as arranged for in the plan of chapter titles. The task has involved a revision, partial rewriting, and the addition of several chapters. This may explain discrepancies in point of view and in style for which I can but apologize. Miss Norsworthy's many friends, to whom this book is affectionately dedicated, will, I am sure, understand that any adverse criticisms should be directed towards the reviser. I am indebted for valuable help to Professor E. L. Thorndike, not only in retaining the many quotations from his works, and in the organization of the early part of the book, but also for much friendly criticism. My thanks are due also to Professors Strayer and Monroe, to Dr. Hollingworth for suggestions in chapter XVI, and to my cousin for assistance in proof reading. This groundbreaking work connects the knowledge of system function developed in ecosystem ecology with landscape ecology's knowledge of spatial structure. The book elucidates the challenges faced by ecosystem scientists working in spatially heterogeneous systems, relevant conceptual approaches used in other disciplines and in different ecosystem types, and the importance of spatial heterogeneity in conservation resource management. This volume assembles the most recent thinking and empirical research from key theorists and researchers on how children, from preschool through early adolescence, make sense of their own and others' emotional experience. Contributors discuss the control of emotion, the role of culture, empathic experience, and the emerging theory of mind that is implicit in children's views of emotion. Annotation copyrighted by Book News, Inc., Portland, OR How does education shape a person's worldview and ultimate success? How does the traditional British education system that was imposed on many African territories compare to the education system in the United States? What role did Historically Black Colleges and Universities play during the Civil Rights Movement in the United States? What role do they and other kinds of non-traditional higher education institutions play today? There is one man who is uniquely qualified to answer these questions - Dr. Joel Nwagbaraocha. *Evolution of an Educator* is the story of a man whose education began in the British Cameroons and Nigeria, continued at Norfolk State University, a traditionally Black University in Virginia, and finished with a doctorate degree at Harvard. From there, Dr. Nwagbaraocha went on to have a stunning career in education that included 20 years of consulting at Historically Black Colleges and Universities, serving as an academic administrator and professor at three colleges and as president of a Liberal Arts College, and another twenty-five years at Strayer University as faculty, Provost and Chief Academic Officer, and Interim President. His story not only offers a unique perspective on higher education institutions but also is a very personal story about an African man who came to America with few belongings and no family, and yet found a way to both shape his own destiny and impact the American education system by espousing the principles of equality, integrity, and hard work. Kaplan's, *5-Steps, Crash Course* and other review books are great resources for the last month before the exam, but the *Tamm's Textbook Tools* series of student activity books are an accompaniment all year long. This AP\* *World History* companion is filled with vocab, activities and assignments that follow the *Strayer & Nelson Third Edition of Ways of*

the World for all 23 chapters. The activities in this workbook can be used as regular weekly assignments or reviews. They can be used on short notice if there is a sub, or be assigned as regular homework. All you need is the textbook. Teachers can copy at will, or use the book as a student consumable. As publishers began putting their content online, a niche for traditional classwork was opened, a void filled by this series. And whether the textbook itself is written in ink or electrons, many students still find it more valuable to write and keep notes for themselves on paper, and portfolios still matter. The activities in this workbook challenge students to apply the concepts, give examples, and diagram every chapter. Find TTT on FB. Does empathy help us to be moral? The author argues that empathy is often instrumental to meeting the demands of morality as defined by various ethical theories. This multi-faceted work links psychological research on empathy with ethical theory and contemporary trends in moral education.
