You're sick of paying high rental costs when you know that you'll never own that property and it simply makes sense to start investing in your own future. Buying a home is an exciting adventure, and whether this is your first home

or your second, it's important that you take your time when evaluating potential properties so that you end up with a property that truly reflects your style, your preferences, your lifestyle and of course, the size of your family. When considering properties, you also need to think outside of just the property itself. While that Cape Code on the corner may look like your dream home, what about the neighborhood? The property costs in certain divisions? Are land taxes reasonable? Are you responsible for water charges? Sewer charges? Recycling costs? Are there any zoning regulations or restrictions that you should be aware of? You

should also consider your own personal lifestyle and make sure that the neighborhood is reflective of where you are in your life and what you are comfortable with. For instance, perhaps you're retired and looking to settle down in a quiet, mature neighborhood only to discover that the majority of families around you are all younger couples, with small children. It's important to look at the big picture when choosing a property so that it truly offers you the setting and the atmosphere that you are most comfortable with. After all, this is your home and you are going to spend many years building a life there! The process of Home Staging

This book is in response to the numerous inquiries from those individuals desiring to own their own home, but its lessons also apply to the experienced homebuilder. The book is aimed at helping the first time

homebuilder who wants to be manager of his/her own building process. This guide will show you how to be in charge and how to successfully complete the home building project. As a guide, it is intended to help you through the various phases of planning and managing your home building project. One advantage is that you, as the builder, will develop a house that you feel represents your lifestyle, your dream and your personality.

Another advantage, is that you have the potential to save a substantial amount of money. By following these basic concepts, you can also save money from unintended or hidden costs that often occur during the building process. Each of the topics covered, is intended to make you aware of the building process, what it consists of and how everything is interrelated. It is not the intention of this book to try and make you a home-building expert. There are many books written on each individual topic, as well as many educational courses, in order for one to prepare to be an expert. What this book will do for you, is make you aware of

the building process and aware of the questions you must ask of those people associated with this business, those people with whom you will have to work. If you are not in the business of building or construction, there are certain procedures for planning and building a house that you should learn. The book will review these procedures with you. You should be prepared to plan out your house thoroughly, or you may find out (too late) that the house you ultimately end up with is not really the house you thought you were getting. Due to inadequate planning and control, you may also find that the final cost of the house has far exceeded your original

budget. Building your own house can be a rewarding experience from both a personal achievement and from money saving considerations. Follow the guidelines and suggestions in this book and you will potentially save many thousands of dollars while building your home. Good luck and enjoy your new home for many years to come.
