Students who are beginning studies in technology need a strong foundation in the basics before moving on to more advanced technology courses and certification programs. The Microsoft Technology Associate (MTA) is a new and innovative certification track designed to provide a pathway for future success in technology courses and careers. The MTA program curriculum helps instructors teach and validate fundamental technology knowledge and provides students with a foundation for their careers as well as the confidence they need to succeed in advanced studies. Through the use of MOAC MTA titles you can help ensure your students future success in and out of the classroom. Database Administration Fundamentals covers introductory knowledge and skills including: relational databases; core database concepts; relational database concepts; security requirements for databases and the data stored in them; database objects -- such as tables and views; graphical tools and T-SQL scripts; database queries; and stored procedures. The Microsoft Technology Associate MTA certification is an entry-level certification which serves as a good starting point for students and educators who may eventually progress to the higher programs. Simply put, it assesses the foundational knowledge necessary to pursue MCSE, MCSA and the like. The MTA

certification focuses more on knowledge and a little less on skills. This Cloud Fundamentals exam primarily covers Office 365 and Microsoft Intune. Office 365 is constantly evolving so changes to the exam contents may be frequent. Be ready to see conflicting information from different sources everywhere! This ExamFOCUS book focuses on the more difficult topics that will likely make a difference in exam result. The book is NOT intended to guide you through every single official topic. You should therefore use this book together with other reference books for the best possible preparation outcome. FIA Foundations in Financial Management - FFM -Kit The Microsoft Technology Associate MTA certification is an entry-level certification which serves as a good starting point for students and educators who may eventually progress to the Microsoft Technology Specialist MCTS or higher programs. Simply put, it assesses the foundational knowledge necessary to pursue MCTS, MCITP or MCPD certifications. The certification focuses more on knowledge and a little less on skills. However, the knowledge areas are all based on MS products so you must know those products inside and out. Questions on the general knowledge are relatively easy. Product and technology specific technical questions, however, are way more difficult. This is why we developed this study product - we focus on those difficult topics that involve difficult technical skills. We want you to be able to answer these difficult questions and secure exam success accordingly. Exam 98-365: Windows Server Administration Fundamentals is all about Windows Server 2008. Topics covered include: Understanding Server Installation Understanding Server Roles Understanding Active Directory Understanding Storage Understanding Server Performance Management Understanding Server Maintenance A companion book for implementing Microsoft Dynamics 365 Business Central. Now updated for the 2019 Wave 2 release. Targeted end-users, super-users and administrators, this book covers many of the challenges you're faced when implementing a cloud-based ERP system. From setting up the system and creating the first company, to user customizations and integration. Business Central used to be Dynamics NAV and before that Navision. NAV has always been a partner-driven application. Customers buy the software at a partner, and the partner helps with implementation. A great model that has worked for over a million users across the globe. Now Business Central is a cloud offering; there's no longer an installation. You no longer need an IT guy to install it and then a consultant to help you set it up. You can do that yourself. Most customers still chose to get the consultant help to make sure you're doing it right and to ensure a great start. This book is written to help customers who venture into Business Central, with or without external help. Written to help understand the system and ensure a great experience starting with Business Central. The book is not written to be read from cover to cover. Instead, it's meant to be a Field Guide. A companion book to help you through the implementation. And later, when you need information on a specific topic or if you need a bit of inspiration. The documentation from Microsoft is pretty good, and I'll provide links for deep dive and background information. Business Central covers a vast area of functionality, and the book includes the areas and issues I encounter in my daily work with Business Central customers. I'll add new chapters and details based on my experience and reader feedback. I'm using an English language layer on my Business Central throughout this book. If your Business Central is not in English, switch temporarily to English in My Settings to more comfortable being able to follow the instructions. If you cannot find the answer you need in the book, feel free to contact me. I'm always open to suggestions for the next topic. In the early days of certification study preparation the focus was almost exclusively on cramming. We had a new medium for content that didn't come with the same restrictions as the more traditional forms. We could present material as we felt was necessary and we could do it quicker. As the certification industry grew, so did the approach to gaining readership. In many cases, publishers had their focus shifted away from ultimate understanding of what was being covered, to producing word-for-word exact-match contents significantly motivated by increasing revenue. While it's definitely easier to produce content by going that route, we don't believe it's the only way to conquer an exam. At the same time, we don't believe readers need the 500-page megatext. As long as there's a balance, we are happy. Our mission at ExamREVIEW is to be a part of that balance. Our No-Frills ExamFOCUS study notes are written to be plain simple and straight forward. We don't paginate material to increase page count, we break them apart across logical boundaries to improve readability. All fancy extra features are removed. We provide study notes that are concise and occupying less pages (so to save trees). And we want you to be up and ready as easy as possible! We are the original developer of our NO FRILLS Exam prep products. Contents are developed entirely in-house, basing on our own research efforts. We believe that with the right preparation material and the right study approach, everyone can clear exams ethically. Many of our products include practice review questions.
