Titel-catalogus van de gedurende 1901/1910-1956/1960  
(Title varies slightly). Sinds de late Middeleeuwen vormen  
bemaling en gemalen onmisbare schakels in het proces  
van leefbaar en bewoonbaar maken van de Nederlanden.  
Vanaf de intrede van de mechanische bemaling heeft de  
aandrijving van gemalen plaatsgevonden door  
achtereenvolgens stoom, verbrandingsmotoren en  
elektromotoren. De verbrandingsmotor, eens zo  
belangrijk, behoort inmiddels tot het verleden. Het  
hiermee uitgeruste gemaal dreigt daardoor te verdwijnen  
en daarmee ook waterschapserfgoed met een grote  
cultuurhistorische waarde. Dit rijk geïllustreerde boek  
documenteert de rol van dit gemaaltje als onderdeel van  
de Nederlandse bemalingsgeschiedenis. Van de vroegste  
ontwikkeling van de verbrandingsmotor tot de laatste  
stand van de techniek worden de diverse toegepaste  
typen en soorten en hun fabrikanten voor het voetlicht  
gebracht en aan de hand van voorbeeldgemalen  
besproken. Er wordt apart aandacht besteed aan de  
ontwikkeling van het onderhoud en de bediening van deze  
installaties en de menselijke aspecten daarvan. This book  
provides a framework for international comparisons of  
taxes and charges in transport and discusses the  
economic principles for efficient systems of taxation. This  
report outlines the development of transport investment  
and expenditure in the ECMT countries in 1979. The  
second part of the report provides statistics on Road  
Accidents in ECMT countries in 1980. The image of BMW  
is very strongly associated to high power, sports biased,  
luxury cars in the premium car segment, however,

particularly in the United States and some parts of Asia, the combination of a car in this segment with a diesel engine was up until now almost unthinkable. I feel sure that many people in the USA are not even aware that BMW produces diesel-powered cars. In Europe there is a completely contrary situation which, driven by the relative high fuel price, and the noticeable difference between gasoline and diesel prices, there has been a continuous growth in the diesel market since the early eighties. During this time BMW has accumulated more than 20 years experience in developing and producing powerful diesel engines for sports and luxury cars. BMW started the production of its 1st generation diesel engine in 1983 with a 2,4 l, turbocharged IDI engine in the 5 series model range. With a specific power of 35 kW/l, this was the most powerful diesel engine on the market at this time. In 1991 BMW introduced the 2nd generation diesel engine, beginning with a 2,5 l inline six, followed in 1994 by a 1,7 l inline four. All engines of this 2nd BMW diesel engine family were turbocharged and utilized an indirect injection combustion system. With the availability of high-pressure injection systems such as the common rail system, BMW developed its 3rd diesel engine family which consists of four different engines. The first was the 4-cylinder for the 3 series car in the spring of 1998, followed by the 6-cylinder in the fall of 1998 and then in mid 1999 by the worlds first V8 passenger car diesel with direct injection. Beginning in the fall of 2001 with the 4-cylinder, BMW reworked this DI engine family fundamentally. Key elements are an improved core engine design, the use of the common rail system of the 2nd generation and a new engine control unit with even better performance. Step by

step, these technological improvements were introduced to production for all members of this engine family and in all the different vehicle applications. In the next slide you can see the production volume of diesel engines by BMW. From the 1st family we produced {approx} 260,000 units over eight years and from the 2nd family {approx} 630,000 units were produced also during an eight year period. How successful the actual engine family with direct injection is can be seen in the increase of the production volume to 330,000 units for the year 2002 alone. The reason for this is that, in addition to the very low fuel consumption, this new engines provide excellent driving characteristics and a significant improvement in the level of noise and vibration. Page 2 of 5 In 2002, 26% of all BMW cars worldwide, and nearly 40% in Europe, were produced with a diesel engine under the hood. In the X5 we can see the biggest diesel success rate. Of all the X5 vehicles produced, 35% Worldwide and 68% in Europe are powered by a diesel engine.
